

4.3 Exercise

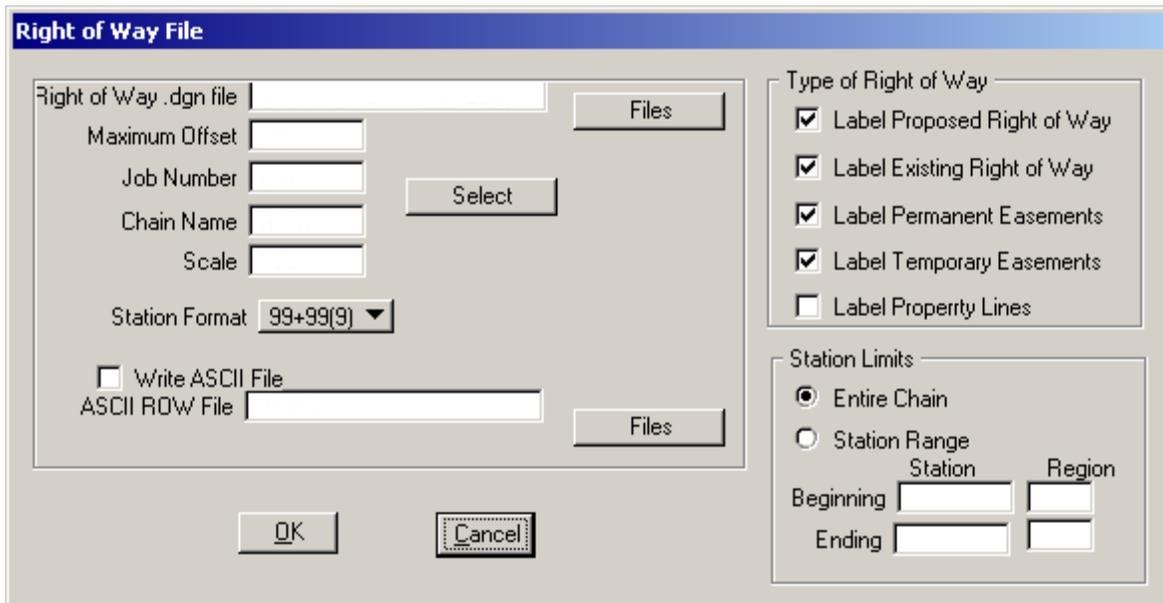

This is a group exercise to demonstrate the use of the 3PC Tool RW Pts.

1. Open the MicroStation file **rw_j7s0066.dgn**. Do a fit view.

2. In MicroStation, go to **Applications > GEOPAK Road > User Preferences**. Set the **Distance Decimal** to two places as shown below.

3. Start D & C Manager. Go to **3PC Tools** and double click on **RW Pts**. Here is what the dialog box should look like.

4. Now plot the Right of Way labels for the proposed alignment using the following settings:

Right of Way.dgn file: **rw_j7s0066.dgn**
Maximum Offset: **200**
Job Number: **066**
Chain Name: **propcl660**
Scale: **100**
Station Format: **+99(9)**
Write ASCII File: **On**
ASCII ROW File: **RW.csv**
Label Proposed Right of Way: **On**
Label Existing Right of Way: **On**
Label Permanent Easements: **Off**
Label Temporary Easements: **Off**
Label Horizontal Control Points: **Off**
Stain Limits: **Entire Chain**

5. In MicroStation, go back to **Applications>GEOPAK Road>User Preferences**. Reset the **Distance Decimal** to four places.
